TV Intelligence Scanner — Firmware Compatibility Report

TV: project #1 SAMPLE — Bench TV (synthetic data) — Acme TESTTV55, board TP.MS338.PB801, panel LC550EGE | Candidate: firmware #2 upgrade_tv_v2.bin (SHA-256 0706d080792e1898…) | Baseline: firmware #1 | 2026-11-08T22:07:06Z | v1.0.0

VERIFIED COMPATIBLE (score 70)

• model, architecture, board/SoC and layout confirmed against the TV's own firmware; no concerns

Criteria

Criterion	TV	Firmware	Status	Evidence
model	TESTTV55	TESTTV55	match	build properties of the firmware
mainboard	TP.MS338.PB801	mentioned	match	firmware string 0x00040e04
soc	MSD6A648		unknown	SoC not named in firmware
architecture	ARM (32-bit)	ARM (32-bit)	match	baseline and candidate analysis
ram	1024 MB		unknown	firmware states no memory requirement
flash	8 MB		unknown	candidate is not a full flash image with a partition table
panel	LC550EGE	3 panel configuration file(s)	match	extracted file 0x00030000_gzip/cpio_contents/vendor/config/panel/panel_lc550ege.ini
bootloader	U-Boot 2015.04-tv	U-Boot 2015.04-tv	match	same bootloader
display_drivers			unknown	loadable modules not available on both sides (drivers may be built into the kernel)
audio_drivers			unknown	loadable modules not available on both sides (drivers may be built into the kernel)
wifi_drivers			unknown	loadable modules not available on both sides (drivers may be built into the kernel)
partition_layout			unknown	no partition table in either image
signing	Android Verified Boot, SHA256_RSA2048	Android Verified Boot, SHA256_RSA2048	match	same signing scheme (keys are not verified by this application)
hardware_configuration	3 confirmed component(s)		unknown	no component part numbers named in firmware (normal for most packages)
integrity		verified	match	library copy intact; download hash matched the value published by the source
source		Official (https://github.com/acme-sample/testtv55-fw/releases/download/V2.0/upgrade_tv_v2.bin)	match	official package

A verdict is only as good as the evidence: 'unknown' criteria were not proven either way. Only VERIFIED COMPATIBLE allows execution in the Upgrade Manager, and only through a verified official method.
