TV Intelligence Scanner — Firmware Search Report

Search #1 | started 2026-11-08T22:07:05Z | finished 2026-11-08T22:07:05Z | providers: GitHub | v1.0.0

Search criteria

Criterion	Value	Origin
manufacturer	Acme	
model_number	TESTTV55	
mainboard	TP.MS338.PB801	
architecture	ARM (32-bit)	

Results (2)

A search result is NOT a verified firmware. 'VERIFIED MATCH' is only possible after download, hash verification and analysis that confirms the model. Risk 'Critical' results should not be used.

#	Verdict	Score	Risk	Firmware / title	Version	Source	URL	Published	SHA-256	Verification
1	VERIFIED MATCH	100	Medium: not an official manufacturer source (github.com)	upgrade_tv_v2.bin	V2.0	GitHub (github.com)	https://github.com/acme-sample/testtv55-fw/releases/download/V2.0/upgrade_tv_v2.bin	2026-02-03	0706d080792e18981c0f…	downloaded; SHA-256 matches the value published by the source
2	HIGH CONFIDENCE MATCH	65	High: not an official manufacturer source (github.com); source publishes no SHA-256; result is a page/repository, not a specific firmware file	acme-sample/testtv55-fw		GitHub (github.com)	https://github.com/acme-sample/testtv55-fw	2026-01-02	none published	search result only (not verified)
