TV Intelligence Scanner — TV Identification Report

Generated: 2026-11-08 22:07:06 UTC | Application v1.0.0 | Project ID 1

1. Identification summary

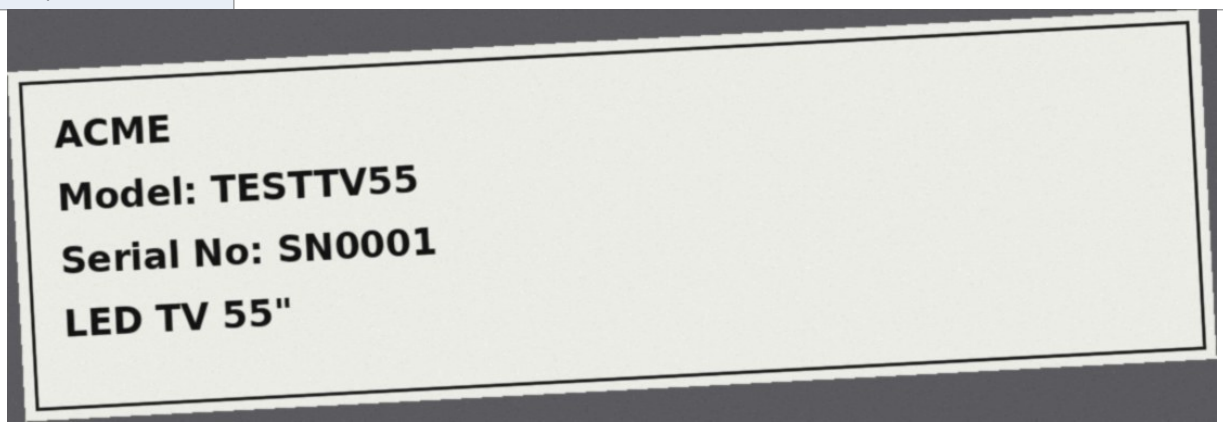

Project name	SAMPLE — Bench TV (synthetic data)
Manufacturer	Acme
Model	TESTTV55
Serial number	— not determined —
Product code	— not determined —
Chassis	CH-9
Mainboard	TP.MS338.PB801
PCB revision	— not determined —
Screen size (in)	55.0
TV type	— not determined —
Platform / OS	— not determined —
Firmware version	V2.0
Panel model / ID	LC550EGE
Identification status	identified
Identification confidence	74%
Data source	mixed
Registered	2026-11-08T22:07:04Z
Last updated	2026-11-08T22:07:06Z

Note: 'manual' values were typed by the operator and are not independently verified (they count for 80% of their weight). 'evidence' values were read from the images below by OCR and accepted by the operator; 'mixed' means both. Status 'verified' requires manufacturer and model to be evidence-backed. Fields marked 'not determined' had no supporting evidence.

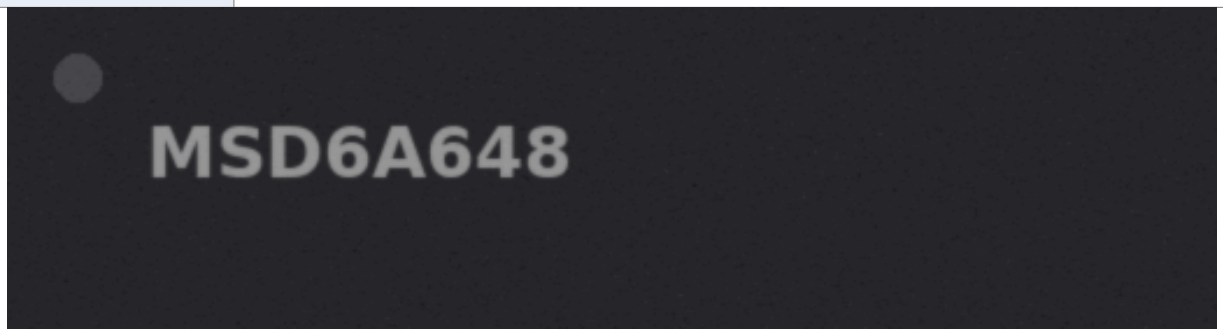

Notes: Synthetic demonstration data generated by TV Intelligence Scanner

2. Evidence images

Type	TV rear label
Original file	label.jpg
SHA-256	`e70bc4e2f58c456237d4e120a239e43d336cc4c7ea23f3a1544c971cc46c4c6a`
Dimensions	1116 x 380 px, 49,027 bytes
Added	2026-11-08T22:07:05Z
Description	rear label

Type	Electronic chip
Original file	chip.png
SHA-256	3b3be0c0b194b98407a8db138a69d8f67ac7f39dbbbbe6faa5ad171c98f26dd6
Dimensions	520 x 138 px, 30,259 bytes
Added	2026-11-08T22:07:05Z
Description	SoC marking

3. Firmware associated with this project

File	Category	Format	Size	Integrity	SHA-256
upgrade_tv_v2.bin	Official	Unidentified binary (.bin)	726,912	verified	0706d080792e18981c0f257142fec834d5391eb9ccd0c10a471c3b8b1e017ebe
orig_dump.bin	Original	Unidentified binary (.bin)	726,912	hash_ok	cce88a2118fc3fd1edd6b3fbd0cd38030335a5f964dd75e8d27ea476bf1089c7

'hash_ok' only means the stored copy matches the hash recorded at import. It is NOT a statement of authenticity or compatibility.

4. OCR & identification evidence

Evidence	Engine	Preset	Mean conf.	Text (excerpt)
#1	fake 1.0	none/psm6	93%	ACME Model: TESTTV55
#2	fake 1.0	none/psm6	94%	MSD6A648

Identification candidates (accepted values are applied to the project; rejected/pending values are listed for transparency):

Field	Value	Conf.	Method	Evidence	Status
model_number	TESTTV55	88%	label_key	#1	accepted

5. Chip & PCB markings

Kind	Marking	Vendor (convention)	Type	Conf.	Status
chip	MSD6A648	MStar (now MediaTek)	TV SoC / scaler	66%	confirmed

Vendor/type come from part-number numbering conventions and are not a specification. Only 'confirmed' markings were verified by the operator.

Confirmed hardware components:

Type	Part number	Manufacturer	Evidence	Source
soc	MSD6A648	MStar (now MediaTek)	#2	marking rule mstar_soc

Type	Part number	Manufacturer	Evidence	Source
ram	`K4B4G1646E-BYK0`	Samsung		datasheet #1 p.1; datasheet #1 p.2; decoder samsung_ddr: Samsung DRAM part numbering (K4 + family + density + organisation); decoder samsung_ddr: Samsung DRAM part numbering (K4 + family + density + organisation) (corroborated by datasheet); marking rule samsung_dram
flash	`W25Q64JVSIQ`	Winbond		decoder winbond_spi_nor: Winbond SpiFlash naming (W25Q + density in Mbit); marking rule winbond_spi

6. Audit trail

Time (UTC)	Actor	Action
